QUARTERBACK

Health

Healthcare sees you in pieces. We see the whole you — *and handle everything.*

The coordination layer healthcare has been missing.

THE HOOK

Your health, on autopilot.

Your finances run on autopay. Your subscriptions cancel themselves. Your taxes file automatically.

Your healthcare? Still stuck on hold.

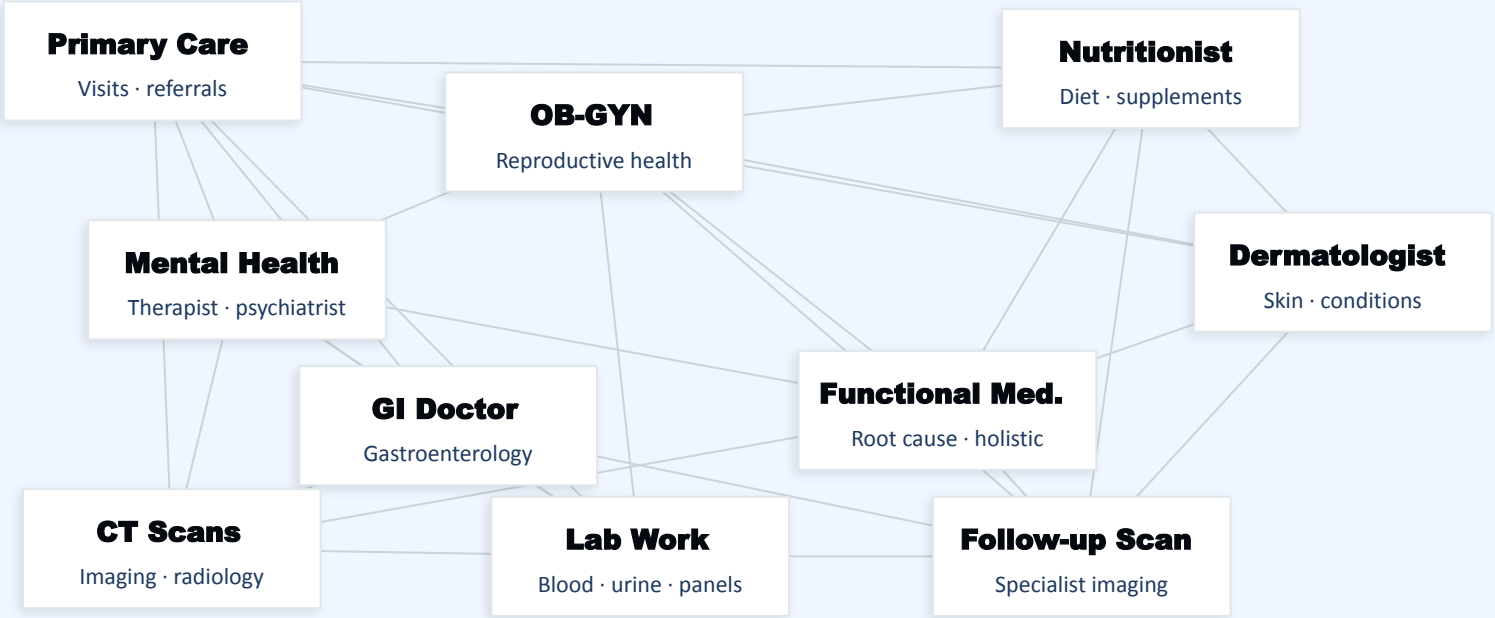
04
Handle
Books it automatically

The user only approves actions. Everything else is handled.

THE THREAD

You are not a collection of appointments. You are one whole person.

But this is what your healthcare looks like today.



You carry all of this.
In your head. In a notes app. On a piece of paper you can't find.

THE THREAD

Your health story exists. No one is holding the thread.

Every provider you visit knows a chapter. None of them know the whole story. That burden falls on you.

Primary Care

Visit notes, referrals

Specialist

Lab results, diagnosis

Follow-up Scan

Imaging, results

Pharmacy

Prescriptions, refills

QB Health

Every chapter, one narrative.

> *QB Health is the thread — weaving every visit, result, and prescription into one continuous health narrative, from provider to provider, so you never have to carry that burden alone.*

THE PROBLEM

Healthcare treats patients as the infrastructure.

But patients were never designed for this role.

88%

of adults lack proficient health literacy

40–80%

of medical info forgotten immediately post-visit

~50%

of what's remembered is recalled incorrectly

Patients are asked to be their own care coordinators. They shouldn't have to be. · Sources: NAAL 2003, U.S. Dept. of Education (health literacy) · Kessels 2003, J R Soc Med, 96(5):219–222 (memory & recall)

THE PAIN

What patients are forced to do manually, every day.

Remember everything

Appointment dates, referrals, follow-ups — all tracked in their head or a notes app.

Decode medical jargon

Lab results and discharge summaries written for doctors, handed to patients.

Navigate phone trees

Spent on hold, transferred, redialled — just to book a follow-up appointment.

Coordinate providers

Specialists don't talk to each other. Patients become the messenger.

Manage multiple portals

MyChart for one doctor, a separate portal for the next. None of it connects.

Track care intervals

Knowing when a colonoscopy or mammogram is due — left entirely to the patient.

THE INSIGHT

Healthcare doesn't need another portal. It needs an execution layer.

TODAY

Patients must…

- ✗ Remember every appointment
- ✗ Translate confusing jargon
- ✗ Coordinate across providers
- ✗ Schedule their own follow-ups

WITH QUARTERBACK

The system handles it.

- ✓ AI detects overdue care
- ✓ Plain-language explanations
- ✓ All providers synced
- ✓ One tap: Handle It

THE SOLUTION

The Autonomous Health OS.

01

Health Memory

BI-DIRECTIONAL EHR SYNC

Deep integration with Epic, Cerner, and Athena. Every lab result, diagnosis, and prescription — stored, structured, never distorted.

02

Translation Engine

PLAIN-LANGUAGE AI

LLMs convert complex ICD-10 codes into clear language. No more confusion at discharge. Care your patients can actually understand.

03

Autonomous Action

AI VOICE AGENTS

AI navigates legacy phone trees to call, negotiate, and book follow-ups automatically. Zero patient effort required.

Three pillars. One persistent layer. Zero manual coordination.

HOW IT WORKS

From lab result to booked appointment — automatically.

1. **Provider Detected** — EHR SYNC
2. **Visit History Analyzed** — HEALTH TIMELINE
3. **Follow-up Identified** — AI FLAGGING
4. **AI Calls Office** — VOICE AGENT
5. **Appointment Booked** — AUTO-CALENDAR

S

Sarah, 45 — The Shadow Caregiver

Manages her father's oncology appointments and her daughter's asthma — simultaneously. Before QB Health: 6+ hours/week on hold, translating confusing lab reports, praying nothing fell through the cracks. Now: every appointment auto-booked, every result in plain English, every follow-up tracked.

THE MARKET

Healthcare logistics is a daily operational problem.

194M+

Americans with chronic conditions

CDC — CORE QB TARGET

53M+

Unpaid shadow caregivers

AARP 2020 — B2C TIER

$25B+

Patient navigation market by 2035

GROWING AT 8–12% CAGR

$78B

Lost annually to failures of care coordination

JAMA 2019 — SHRANK ET AL.

THE VISION

Quarterback becomes the operating layer for personal healthcare.

> *"The winner in this space will own the patient relationship while integrating with — not replacing — existing infrastructure."*
